

SUMMARY REPORT: DISTRICT SAFTY DRILL

On November 2, 2022 safety drills were conducted at Milwaukee Public Schools. The drills consisted of a standard response to an emergency situation. Yearly all Wisconsin schools, public and private, must conduct an emergency drill required by WI State Statute 118.07(4)(cp) also referred to as Act 143.

Principals then prepare a written evaluation for the school board to review within 30 days of the drill. The board is then to provide a certification of the drills that will be forwarded to the Office of School Safety within the WI. Department of Justice by January 1st, 2023.

The drills are intended to provide training for a building's occupants should an emergency situation occur and that would require a response based on the district and schools' safety plan. The schools' individual evaluations were very similar where administrators observed minor issues of concern. Those minor concerns were addressed at the school level by the administrators and will continue to be monitored in future drills. The drills lasted a few minutes, variations in time depended on the size of a school.

The drills were completed appropriately rendering discussions at the school level as to what needs improvement.
